GETTING STARTED

This guide walks you through the most common reporting tasks using tools in Epic.

Overview of reporting content

Your reports and other reporting content can be accessed through your available dashboards or the Analytics Catalog.

When you run a report from a dashboard component, the results are shown directly in that component. You can take additional action on the results, which is covered in another section of this guide.

The Analytics Catalog is a database of available reports and dashboards that links directly from your dashboards. You can quickly access your favorite content and search for new content. Run a report from the Catalog to see the results.

Overview of dashboards

Dashboards centralize information you need throughout your day and are the primary method of reporting content distribution. Instead of going to multiple screens to run reports, view your schedule, and access your In Basket messages, you can see all this information on your collection of dashboards.

Your default favorite dashboard appears when you log in and toggle to the  My Dashboards activity.

You can access other available dashboards by clicking the name of the dashboard, such as **Clinic Manager - Home**, and selecting another favorited dashboard. If you want to search for additional dashboards, type the name of the dashboard in the search bar or click **Show Catalog** to browse the full list.

Favorite your dashboards for easy access later. To make a favorited dashboard your default dashboard, drag it to the top of the list.

NAVIGATE DASHBOARDS

Toggle between dashboards

The first dashboard you see when you toggle to  My Dashboards is your primary dashboard. Depending on your reporting needs, there might be several dashboards you need to regularly access.

To toggle to a different dashboard, simply click on the current dashboard name and select a new dashboard.

Switch to a favorited dashboard

Your commonly used dashboards should be favorited for easy access. You can favorite individual dashboards or a group of related dashboards, called redirectors, by clicking the star next to the name.

Search for and switch to a new dashboard

If you need a dashboard that isn't favorited, or simply want to browse the available reporting content, you can search for dashboards in the Analytics Catalog.

1. Click on the current dashboard name and then **Show Catalog**.
2. Enter a search term. Filter results by a content type of Dashboards.
3. Hover over a dashboard and click  to view more details about the record.
4. If appropriate, click  **Open**.
 - You can also hover over a dashboard and click  without viewing the record details.

Plan on needing this dashboard again in the future? Hover and click  to favorite a dashboard for easy access later.

Access the My Analytics dashboard

The My Analytics dashboard is a hub for accessing saved SlicerDicer sessions, Reporting Workbench favorites, and recent runs in one place. From the Analytics Catalog, click **My Analytics** in the lower-left. From a dashboard, click the dashboard title, then click **My Analytics**.

Organize the dashboard

Create a dashboard view

If you have different use cases for the same dashboard, create multiple views. Views save all your changes to a dashboard so you can quickly toggle between them depending on the use case at hand.

1. Open the dashboard you want to create a new view for.
2. Click  to open the view manager.
3. Click **+ New View**.
4. Enter a name and click **Accept**.
5. Make any changes to the view, such as updating the layout or setting dashboard parameters.

Manage dashboard views

1. Click  to open the view manager.
2. For any views shown:
 - Click the view to open.
 - Click  to edit the layout.
 - Click  to delete the view.
3. Select the original dashboard to open the dashboard without any of your changes applied.

Organize components on the dashboard

1. Open the view manager and click  to edit the layout.
2. Drag a component to where you want it to appear.
3. To resize a component, drag its bottom or side edge.
4. When finished making changes, click  **Accept**.

Update your component settings

1. Open the view manager and click  to edit the layout.
2. Hover over a component and click **Edit display settings**.
 - The settings available to edit will change based on the component type. Some examples include updating thresholds, changing the component display name, or reordering links.
3. Update the settings and click **Close** when finished.

Manage component views

1. Hover over a component and click **Options** .
2. **Hide** or **show** graph or table views.
3. Edit  **Badges**.

Organize your report lists in the Link component

1. Open the view manager and click  to edit the layout.
2. Hover over the Link component and click  then  **Edit display settings**.
3. Drag a report to where you want it to appear in the list, and then accept.

Add components to the dashboard

1. Click the dashboard name, and then click **Show Catalog**.

2. Enter a search term.
3. Filter by a content type of Components.
4. Hover over a component and click the plus sign to add it to your dashboard.

Update dashboard parameters

Dashboard parameters allow users to determine which data appears in selected dashboard components. There are two options to set dashboard parameters.

Summary Targets

Summary Target parameters appear in selection boxes or a Select Dates button at the top of the certain dashboards. Hovering over the summary level target box highlights the affected components. Summary Targets vary by dashboard.

1. To change the summary level in a Summary Target box, click the  magnifying glass (single selection) or pencil  (select multiple).
2. To change the summary level of dates for metric components, click the  box at the top right of your dashboard. To go back to the default date range of the dashboard, click the "Select a date" box again and click "Default".

Parameter Editor

Configure all dashboard parameters quickly and easily using the parameter editor on the dashboard. The parameter editor allows you to see all parameters that affect the dashboard and edit any parameter that an administrator made available to edit.

1. Click  in the upper-right to open the parameter editor.
2. Select any parameter with **Editable?** selected and set the value.
 - The value you select determines the dashboard-level default parameter.
3. Click **Applies to components** to see which components are affected by the parameter.
 - Enter a value to override the dashboard-level value.
4. Click **Accept**.

Add benchmarks to your dashboard

Check how your organization stacks up against other Epic organizations by reviewing benchmarking data right on your dashboard.

1. Open a dashboard that shows key performance metrics for your organization.
2. Click  and select **Show Benchmarks**. Benchmarking data appears on your dashboard.
 - If no benchmarking data appears, the dashboard doesn't have any available benchmarks. Repeat step 1 with a different dashboard.
3. To see benchmarking data for a different group of organizations, edit the **Benchmark** parameter next to the dashboard title and select a peer group. A peer group is a set of organizations with some similarity, such as their region or specialty. For example, select the Pediatric peer group to compare your data against data from pediatric organizations.
4. To modify the percentiles that appear for benchmarking data on your dashboard, edit the **Statistic** parameter. For example, you can include information about how the top fifth percentile of organizations are performing for a particular peer group.

To view only your organization's data, click  and select **Hide Benchmarks**.

View SlicerDicer data on your dashboard

Add SlicerDicer data

1. On your dashboard, click  and select **Create Component**.
2. Select the data model you want to see data for.
3. Create or load a session that meets your needs.
4. When the query is completed, click **Create Component**.
5. In the Create Component window:
 - Optionally modify the display name for your component in the Name field.
 - Enter the date range that data should appear for. You can enter either fixed or dynamic dates.
6. Click **Add to Dashboard**.

Modify SlicerDicer data

When you make changes to a SlicerDicer session in an existing component, you can save your changes in the component only if you created the original SlicerDicer session. When you modify a session you own, the session is updated for any users you shared the session with. If you didn't create the session you're modifying, you can save your changes to a new component.

1. Next to the SlicerDicer data you want to modify on your dashboard, click .
2. Modify the SlicerDicer query to meet your needs. For example, you might:
 - Select a different visualization.
 - Modify or add new measures.
 - Modify the slices that appear.
3. If you want to show your modified query in a new component, click **Create Component**.
4. If you created the original session and want to overwrite your existing component with your changes, click **Save**.

Add badges to a dashboard component

You can add badges to the top of a dashboard component to highlight the number of report results for a report in the component. You can add badges for multiple reports in a component, and you can add images next to the badges.

High Priority Organisms	
 21 Results MDRO-All (Last 7 Days)	
Report Title	Results
Acinetobacter (Last 7 Days)	4
CephR-Klebsiella (Last 7 Days)	0
CRE-All (Last 7 Days)	6
CRE-Escherichia coli (Last 7 Days)	1
CRE-Klebsiella (Last 7 Days)	5
ESBL-All (Last 7 Days)	2
KPC (Last 7 Days)	0
MDRO-All (Last 7 Days)	21
MRSA (Last 7 Days)	15
MSSA (Last 7 Days)	0
VRE (Last 7 Days)	6

1. From the dashboard, hover over a component, click , and select  **Badges**.
2. Click  and  to add or remove badges for reports in the component.
3. Click and drag the badges to rearrange them.
4. To add a visualization, click  next to the badge and select a visualization.

Create your own dashboard

1. In My Dashboards, click  and select **Create Dashboard**.
2. Enter a title for your dashboard and click **Accept**.
3. Add your first component to your dashboard.
 - Click **Search the Catalog** to find existing content in the Analytics Catalog that you want to include. Look for a content type of Component.
 - Click **Create with SlicerDicer** to create a component based on data in a SlicerDicer session. You can add an existing SlicerDicer session to your dashboard or create a new one.
4. After you add one component, you can include additional existing components from the Analytics Catalog or create SlicerDicer components by clicking  and selecting **Create Component**.

Share a dashboard

Depending on your security, you can share dashboards you create with other users. Security restricts you to sharing only with users assigned to the same report group as you.

1. From My Dashboards, click .
2. Enter the name of the user(s) you wish to share with.
3. Click  **Share**.

RUN KEY REPORTS

Run reports from dashboards

Dashboards contain the most heavily used reports for your day-to-day operations. Some reports are directly embedded in your dashboard and display results in a table or graph. Simply click to run the report.

Other reports are listed in Link components and act as shortcuts to the report. Depending on the report type, you can click to directly jump into the report, or click to request the report to be run. When results are ready to view, you can click again to open the results.

Run reports from the Analytics Catalog

The Analytics Catalog is a database of available reports and dashboards. You can search for, modify, and run reports directly from the Catalog.

Access the Catalog

From My Dashboards, click on a dashboard name, and then click **Show Catalog**.
From anywhere else in the chart, search to open the Analytics Catalog.

Run a report from the Catalog

1. Search for a report by name or topic. You can filter results by favorites, content type, and tags.
 - If you prefer to look at the available content without searching or filtering, click **Browse**. This will show all content available to you.
2. Apply filters on the left to limit your search results.

- **My Favorites:** Show content you've tagged as a favorite.
 - **My Content:** Show content that you own or have created.
 - **Approved:** Show content reviewed and approved by your organization.
 - **Content Type:** Search by content type. Types include dashboards and workbench reports.
 - **Tags:** Search by tag.
3. When you've found a report:
- Click  to run the report.
 - Hover, and then click  to view more details about the record.
 - Hover, and then click  to favorite a report.
 - Click  **Edit** to change the report's settings. You can then run the report with your edited settings or save it as a new private report.

Click  in the top right corner of the Analytics Catalog search menu to control if you want to run the report and be taken to the results immediately, or if you want to be notified when the report results are ready to view.

You can view the report result notifications in your notifications feed.

Use private tags to find your reports

Use private tags to organize and find reports in the Analytics Catalog.

1. From the catalog, right-click a report and select **Add My Tag**.
2. Choose an existing tag. If a tag does not exist, select **New tag** to create a new one.
 - a. Give the tag a name.
 - b. Click **Done**.
3. To filter by a tag, select it in the **Tags** section.
4. To remove a tag, right-click a report and select **Remove My Tag**.

Run a report on someone else's patients

Some reports are set up so you can run them to report on someone else's patients. For example, a physician might ask his nurse to contact his patients who didn't show up yesterday for their appointments. The nurse can run a report that searches the physician's patients for no shows.

1. In the Catalog, hover over the report you want to run and click  to edit.
2. On the **Criteria** tab, search for the **Run as user** criterion.
3. In the **User** field, enter the person for whom you are running the report.
4. Update any other required criteria, and then run the report.
 - If you receive a message asking if you want to save the report, only save if you run this report often. Don't save if this is the only time you will run this report for this person.

Receive notice when report results are ready

Reports that gather a lot of data can take a long time to run. Before running a report, you can tell the system to send you an In Basket message when the results are ready so you can do other work while the report runs.

1. In the Catalog, hover over the report you want to run and click .
2. On the **General** tab, scroll down to the User Notification section.
3. Next to Send me an In Basket notification... select **Yes**.
4. When you run this report, you'll receive an In Basket message when the results are ready. Click the link in the message to open the report's results.

Share a report's results in Epic

Before running a report, you can choose to send an In Basket message to groups or individual users when the results are ready.

1. In the Catalog, hover over the report you want to run and click .
2. On the **General** tab, scroll down to the Share Results section.
3. Enter the group or user you want to share the results with in the **With Groups** or **With Users** field.
4. Enter **Yes** in the **Notify** field.
 - When you run this report and results are ready, the groups or users you selected will receive an In Basket message with a link to the results.

Save a report's results

After you run a report, you can save the results if you'll need to review them after they expire.

Saved report results appear in the Saved Report Runs section when viewing a report in the catalog. Saved report results expire, after which their information might no longer be relevant.

1. From a report's results, click  and select  **Save Results**.
2. Fill out the details and accept to save the report.

3. To view the results, open the report details in the Analytics Catalog and click the report name. You can also view saved results on the My Analytics dashboard.

Print a report's results

1. From a report's results, click  **Print** on the Hyperspace toolbar and select **Print List**.
2. Select your printer.
3. Select a View to Print from the following options:
 - **Current View:** This option is available only if you made changes without saving. Selecting the view prints exactly what is on screen.
 - **Print Layout tab from Report Settings:** This option prints the layout specified on the **Print Layout** tab of Report Settings.
 - **Saved Views:** Any views you saved are options for print layouts. The default saved view is also the default print view.
 - **Display tab from Report Settings:** This option prints the layout specified on the Display tab of Report Settings.
4. Print the report.

Work with a report's results outside of Epic

With Advanced Reporting Security (manager roles and above), you can export the results of some reports as a .csv (comma separated values) or .tsv (tab separated values) file and import them into Microsoft Excel or another tool if you need to display the data in a different way. For example, you can create an Excel pivot table to better understand a report's results.

1. From a report's results, click  >  **Export Results**.
2. Click **Browse** and select the folder for export.
3. Click **Save**.
4. Add a file password.
5. Click  **Accept**.

Organize your favorite reports in the Analytics Catalog

1. Use **Chart Search** to open the **Analytics Catalog**.
2. Hover over a report and click  in the upper-right corner to add it to your favorites.
3. Favorites will appear at the top of the Catalog. You can also set a filter to see only your favorites.

TAKE ACTION ON REPORT RESULTS

Explore results

After running a report, select the **Explore** tab to filter, slice, and measure the results. The data you see comes directly from the report results. You can filter using the columns available on the report. See the Self-Service Reporting with SlicerDicer section of this guide for more information. To print, click **Print** and then choose to print the current visualization or all saved visualizations.

Sort a report's results

1. From a report's results, click the column header that you want to sort by.
2. To sort results by up to three columns, right-click a column header and select **Modify Columns**.
3. Use the **Sort Order** column to set the order.
 - You sort by up to three columns.

4. Click **Accept**.

Filter a report's results

1. From a report's results, click  **Filter** and select the criterion you want to filter for.
2. Select the options you want to appear in the results.
3. Click **Accept**.
4. To remove the filter, click **Clear All Filters**.

Anchor columns

You can prevent Reporting Workbench columns from moving when you scroll by anchoring them in place. For example, if you anchor important columns, such as Patient MRN or Name, this identifying information won't be out of sight when you scroll to view the rest of a report.

1. In the appropriate report, right-click the heading of the column you want to anchor and select **Anchor Column**. All columns to the left of the column you selected will also be anchored.

Save your view

After you've applied filters, you can save the report with the filters applied. If you save a view, the filters, sorting, and column anchoring are all saved.

1. After applying filters to a report's results, click  and select **Save**.
2. Enter a name for the view and accept.

Manage your saved views

Click  to see saved views.

- To remove a view, click .
- To open a view every time, click .
- To rename a view, click .

Follow up on a report's results

From a report's results, you can follow up on individual patients or groups of patients. For example, you can review a patient's chart to place an order for a patient. When following up on several patients, you can send them all letters or add them to the same patient list. These follow-up actions appear as buttons in the report toolbar. The buttons that appear depend on the report that you run.

To follow up on one or more patients in your report results, select the patients and click the button for the appropriate action.

Add patients to a Health Maintenance plan

Health Maintenance modifiers include or exclude patients from Health Maintenance plans. For example, if most adult females are due for a Pap smear every two years, a Health Maintenance modifier can exclude a patient who needs a yearly Pap smear from the every-two-years plan and include her in the plan for a yearly Pap smear.

1. From an applicable report's results, select the appropriate patient, and click  **HM Modifiers**.
2. Select the modifier you want to add and apply.
3. Close to return to the report's results.

From a report's results, you can select a patient, press **Shift**, and select another patient to select all of the patients in between the two. Or you can select a patient, press **Ctrl**, and select other patients that aren't next to each other. With multiple patients selected, you can add a modifier to all of those patients at once.

Add patients to a patient list

You can access a patient's information directly from a patient list instead of searching through the report results.

1. From an applicable report's results, select the appropriate patient and click **+ Add to List**.
2. Select the list you want to add the patient to or create a new list and click **Add to Patient List**.

MODIFY REPORTS

Modify a report's criteria

You can change reports that don't quite meet your needs. For example, you might use a report that finds your patients with diabetes and high HbA1c results. You can change the report to find all patients with diabetes and high HbA1c results who were seen in your primary department and then save a new version of the report.

1. From the Catalog, hover over a report and click  in the upper-right.
2. On the Criteria tab, use the pencil to change the search value or logic for any criterion.
3. Click the trash can to remove a criterion. If you don't see this icon, the criterion is required.
4. Click **Save As** if you want to create a new version of the report, and then click **Run**.

Add criteria to a report's search

Criteria determine what a report searches for and help you target specific patients in your results. The criteria available vary by report.

1. In the Catalog, hover over a report and click  in the upper-right.
2. On the Criteria tab, search for a criterion to include in the report. Enter a keyword or click the magnifying glass to see all criteria.
3. Beneath your newly added criterion, enter what values the report should find. The available options depend on the criterion you selected.
4. To change the logic between values in a criterion, click **OR**, **AND**, or **Custom** next to the criterion. The button name depends on the logic the criterion is currently using.
5. Click **Save As** if you want to create a new version of the report, and then click **Run**.

Change a report's search time frame

In some reports, you can set a date range to control the time frame the report searches.

The date range applies only to criteria that change over time (these criteria are identified by this  icon).

For example, if you're searching for your male patients between January 1 and March 1, the date range is ignored because a patient's sex rarely changes. All of your patients appear in the results. If you add the criterion BMI > 30, the report uses the date range because BMI can change over time. The search results include only male patients that had a BMI greater than 30 between January 1 and March 1.

1. From the Catalog, hover over a report and click  in the upper right.
2. Click the pencil to specify the date range and, in certain reports, the time range.
 - a. Enter a relative start and end date using one of the following shortcuts: w=week, m=month, mb=beginning of the month, me=end of the month, or y=year. You can also use an absolute date.
 - b. For example, enter "mb-3" to search for patients whose BMI was greater than 30 in the past three full months.
3. Click **Save As** if you want to save a new version of the report, and then click **Run**.

Remove deceased patients from a report's results

1. From the Catalog, hover over a report and click  in the upper-right.
2. Search for the **Patient Living Status** criteria.

3. In the **Living Status** field, select a value of **Alive**.
4. Click **Save As** if you want to create a new version of the report, and then click **Run**.

Add a column to a report's results to show additional data

1. In the Catalog, hover over a report and click  in the upper right.
2. Select the **Display** tab.
 - All of the columns available for the report appear in the **Available Columns** list.
 - All of the columns that currently appear in the report are in the **Selected Columns** list.
3. Select a column from the **Available Columns** list and click the right arrow to move it to the **Selected Columns** list.
4. Click **Save As** if you want to create a new version of the report, and then run the report.

Remove a column from a report's results

1. From the Catalog, hover over a report and click  in the upper right.
2. Select the **Display** tab. All of the columns that currently appear in the report are in the **Selected Columns** list.
3. Select a column from the **Selected Columns** list and click the left arrow.
4. Click **Save As** if you want to create a new version of the report, and then click **Run**.

Keep columns in the same place

You can prevent Reporting Workbench columns from moving when you scroll by anchoring them in place in Report Settings.

1. From the Catalog, hover over a report and click  in the upper-right.
2. On the **Display** tab, change the number of columns anchored using the drop-down **Anchor** menu.
3. Move the colored Anchor divider in the Selected Columns list using the  and  arrows so that the columns you want anchored are above the divider.
4. Click **Save** to save the new anchor settings, and then click **Run**.

Change the order of the columns in a report's results

1. From the Catalog, hover over a report and click  in the upper-right.
2. Select the **Display** tab and the column you want to move in the Selected Columns list.
3. Click  or  to move the column up or down. The first column in the list is the leftmost column in the report's results.
4. Click **Save As** if you want to create a new version of the report, and then click **Run**.

Change the width of a column in a report's results

1. From the Catalog, hover over a report and click  in the upper-right.
2. Select the **Display** tab and double-click a column in the Selected Columns list.
3. Enter the column width you want to use and click **Accept**.
 - Column width is measured in twips. To figure out how many twips to enter, compare the width of the column you want to change to the width of other columns.
4. Click **Save As** if you want to create a new version of the report, and then click **Run**.

Change the color and font in a report's results

1. From the Catalog, hover over a report and click  in the upper-right.
2. On the **Appearance** tab, select **Set custom colors**.
3. Indicate whether you want to set the colors and fonts by rows or columns.

4. For each row or column you want to change, click in the associated field to change the Text color, Background color, or Font type and size. Your changes appear in the preview below.
5. Click **Save As** if you want to create a new version of the report, and then click **Run**.

Call attention to specific values in a report's results

You can change a report's display so specific values in the results stand out. For example, when running a report to see all diabetic patients' recent A1C levels, you can have any level above 7 (abnormal) appear with a red background so you can quickly identify patients to check on.

1. From the Catalog, hover over a report and click  in the upper-right.
2. On the **Appearance** tab, under Conditional Formatting, click **Add Rule**.
3. Choose to apply your formatting to a single cell or the entire result row.
4. Set when this formatting should appear:
 - a. In the **Column** field, select the column that contains the values you want to call out.
 - b. Enter the logic you want to use in the **Operator** field.
 - c. Enter what the system should look for in the **Value** field.
5. Choose from a Preset formatting option or create Custom formatting.
 - With custom formatting, you set the font type and size, font color, and cell background color.
 - A sample visual of your formatting appears to the left.
6. Accept to save changes.
7. Click **Save As** if you want to create a new version of the report, and then click **Run**.

Organize action buttons

You can remove and reorder the default buttons that appear on your toolbar.

1. From the Catalog, hover over a report and click  in the upper-right.
2. Select the **Toolbar** tab and use the check boxes to determine which buttons appear for that report.
3. Click the arrows on the right side of the screen to reorder the buttons.
4. Save your changes when finished.

Save a modified copy of a report

If you change a report, you can save a private copy so you don't have to make the changes each time you run the report. The copy of the report is available to view and run only by you.

If the **Save As** button isn't available in Report Settings, you need to change the report each time you want to run it with these settings. If you often make the same changes, ask your reporting team to create a new version of the report.

After you've created your own copy of a standard report, you can continue to change and save that copy. You don't need to keep making new copies of the same standard report.

1. Click **Edit** in the appropriate report and modify the report to meet your needs.
2. On the **General** tab, select **Public** or **Private** to determine who has access to your modified copy.
3. Save your changes and return to the report.

Modify report tags

Report tags determine two things:

- Where the report appears on your dashboard.
- How often reports run. For example, all reports that run daily have the same daily batch report tag.

When you save a copy of a report, the report tags are copied from the previous report. If you want your new report to be in the same dashboard section as the report you copied it from and want it run at the same interval, you don't need to modify the tags.

If you want your new report to appear in a different section on your dashboard or you want it to run at different intervals, you can modify the report tags.

1. In the Report Settings window, select the **General** tab.
2. In the Tags section, add or remove tags.
